EDUCATION

Back-End Development, ALX SWE Program

2024,

SKILLS

Backend Engineering & APIs

- Advanced Django architecture (modular, scalable application design)
- Django REST Framework:
 - Custom permissions & role-based access control
 - ViewSets, custom actions and advanced serializers
 - Pagination, filtering, ordering and API optimisation
- Authentication & Authorization:
 - JWT (SimpleJWT)
 - Secure role and permission systems
 - Advanced user security and account management
- Middleware development and request lifecycle control
- Background task handling and asynchronous processing
- Performance optimization and query efficiency
- Real-time systems using WebSockets (live chat and active conversations)
- Robust error handling, logging, and production debugging
- Secure payment system handling and integration
- Third-party service integrations (including Shopify)

SUMMARY

Backend / AI Engineer with extensive experience designing scalable Django-based systems, multi-database architectures, and AI-integrated platforms. Proven ability to build secure APIs, real-time systems, and data-intensive applications, including vector-based AI pipelines and LLM integrations. Experienced in Dockerized deployments, CI/CD workflows, and production debugging, with a strong track record of owning projects end-to-end and mentoring junior developers in professional environments

WORK HISTORY

Front-End Developer(intern)

2022- 2023

EasyGo, Hybrid(Accra)

I worked in the role of a front-end developer in this organization. My time with EasyGo taught me a lot on how teams work and a lot gave me a lot of experience with weekly team sprints. I did a lot duties for this company most of them being

- I was the main front-end developer when we did a complete UI overhaul
- I also engineered and added a couple of features to the main website that increased leads by 35%
- Added propose features to main web and admin page to make it easier
- Handled day to day fixing of bugs and maintenance

GitHub Collaborator

2023 - PRESENT

easyCDN, Remote

- Active contributor to a large, production-used open-source project with thousands of users.
- Collaborate closely with the core maintainers on feature development, code quality improvements, and long-term project direction.
- Review and evaluate proposed pull requests, providing technical feedback and ensuring adherence to project standards before merges.
- Contribute to frontend components and UI improvements to enhance usability, performance, and maintainability.

and external APIs)

- Writing detailed and comprehensive project documentation
- Version control (advanced use of Git/ Github)

DevOps, Deployment & Infrastructure

- Docker and Docker Compose (multi-service environments)
- Environment-based configuration management
- CI/CD pipeline setup and maintenance
- Server provisioning and deployment workflows
- Server-side debugging, monitoring, and incident resolution
- Production reliability and uptime maintenance

AI, Automation & Vector Systems

- AI feature integration for automation, analytics, and intelligent workflows
- Onboarding and integrating third-party Large Language Models (LLMs) into existing infrastructure
- Vector data handling:
 - Provisioning and managing vector databases
 - Processing raw data into embeddings
 - Storage and similarity search operations
- AI-driven backend systems and data pipelines

Databases & Data Architecture

- PostgreSQL:
 - Advanced queries, indexing, and transaction management
- Multi-database architectures and database routing
- Multi-tenant schema design
- Large-scale and production-safe migrations
- Data integrity enforcement and constraint design
- Reporting and analytics queries
- Master-slave (primary/replica) database architecture
- Load-balanced database systems

System Design & Architecture

- Monolith & modular Django architecture design

- Author and maintain technical documentation to improve developer onboarding and long-term codebase clarity.
- Participate in issue triage, bug fixes, and performance improvements across the codebase.
- Support the ongoing evolution of the project by balancing feature development with stability and maintainability concerns.

Full-Stack Developer

2024-PRESENT

TheSeventhCreative Agency, Hybrid

This advertisement agency is my first try at commercial full-stack developing and honestly I am impressed at how easy I have settled in. I am only a full stack developer on paper, on ground i fulfill so many roles as follows

- Served as a core full-stack developer across multiple commercial client projects, contributing throughout the full software development lifecycle.
- Acted as project lead for most web development engagements, coordinating sprints, assigning responsibilities, and ensuring timely delivery.
- Designed backend architectures and APIs using Django and PostgreSQL, handling authentication, permissions, data modeling, and integrations.
- Delivered frontend solutions using modern tooling, ensuring clean frontend-backend contracts and maintainable codebases.
- Led architectural design decisions from initial planning through deployment and long-term maintenance.
- Mentored junior and frontend-focused developers transitioning into backend development, providing technical guidance and code reviews.
- Served as a technical liaison during client discussions, translating business needs into scalable, secure technical solutions
- Took ownership of deployments, environment configuration, and post-launch support to ensure system stability and client satisfaction.

Backend Developer

January 2025–Present

IS Evolutions Consult, On-Site

This is my first full time role as a backend developer. I have contributed so much and grown so much in this role

- Lead backend development for the company's flagship product, designing and maintaining scalable Django and Django REST Framework-based systems.
- Architected and implemented secure, high-performance

- Microservices exposure and service-to-service communication
- Scalability and performance strategies
- Caching strategies for high-traffic systems
- Security-focused system design

Frontend & Full-Stack (Supporting)

- React (legacy and active usage)
- Vite-based frontend tooling
- State management patterns
- Frontend-backend contracts and API coordination

Ownership

- End-to-end ownership (architecture, development, deployment, and maintenance)
- Technical leadership and Architectural decision-making
- Mentorship and onboarding of developers
- Sprint planning and delivery co-ordination
- Client communication and requirements translation

Soft Skills

- Problem Solving
- Grit
- Excellent communication skills
- Punctuality
- Eager and Fast Learner
- Adaptability

APIs with JWT authentication, role-based access control, and advanced user management.

- Designed multi-database and multi-tenant architectures using PostgreSQL, including database routers, data isolation strategies, and production-safe migrations.
- Integrated AI-driven features into existing systems, including onboarding third-party LLMs and implementing vector-based data pipelines for intelligent automation and analytics.
- Built real-time features using WebSockets to support live interactions and active user communication.
- Implemented performance optimizations across the backend stack, including query optimization, indexing strategies, and caching mechanisms.
- Designed and maintained master-slave (primary/replica) database architectures with load balancing to improve reliability and read scalability.
- Collaborated closely with frontend and data teams to define API contracts and ensure seamless system integration.
- Oversaw deployment workflows, Dockerized services, CI/CD pipelines, and production debugging to ensure system stability and uptime.
- Contributed to technical documentation, architectural decisions, and continuous improvement of development and deployment processes.
- Integrated third-party services, payment systems, and external APIs to support client business requirements.
- Supported the successful launch and ongoing maintenance of **5+ live production systems**, ensuring reliability, scalability, and iterative enhancement.
